proliferation, preferably in combination with one other growth factor and heparin. Pharmaceuticals comprising PDGF-C polypeptides can also be used for stimulating connective tissue or wound healing. The PDGF-C for stimulating connective tissue or wound healing. The PDGF-C or polypeptide can be enzymatically processed to generate the active truncated form of PDGF-C and used to regulate the receptor-binding specificity of POGF-C. PDGF-C can also be used to promote fibroblast mitogenesis in a mammal and to induce PDGF alpha receptor activation. PDGF-C antagonists can be used to inhibit tumour growth of a tumour expressing PDGF-C in a mammal. Specific types of human tumours, e.g. and erychroleukemia, can be identified by testing for expression of PDGF-C chrosocarcinoma, Wilms tumour, megakaryoblastic leukaemia, lung carcinoma and erychroleukemia, can also be used to inhibit tissue remodelling C reports of tumour cells into a normal population of cells. Antagonists can also be used to inhibit conditions, especially found in the lung, kidney or liver

This shows a murine ZVEGF3 a novel vascular endothelial growth factor homologue. Polypeptides comprising an epitope-bearing portion human or murine ZVEGF3 are claimed. The growth factors comprise a growth factor domain and a CVB domain (generic sequence motifs are shown in AAY96859 and AAY96860). The growth factor domain is characterized by an AY96850 and AAY96860). The growth factor domain is characterized by an AX96850 for control of the "cysteine knot" structure of the platelet-derived growth factor of the "cysteine knot" structure of the platelet-derived growth factor (PDGF) family. The CVB domain shows homology to CVB domains in neuropilins, human bone morphogenetic protein. I porcine seminal plasma protein, bovine acidic seminal fluid protein and Xenopus laevis tolloid. I ke protein. Structural analysis and homology predict that ZVBGF3 polypeptides complex with a second polypeptide to form multimeric proteins. The human zvegf3 gene has been mapped to chromosome 40438.3.

CVBCF3 is useful for stimulating the growth of fibroblasts or smooth muscles cells, for activating cell surface PDGF-alpha receptor and for inhibiting PDGF-alpha receptor mediated cellular processes. ZVBGF3 is useful for regulating (post-development) organ growth, regeneration and cantenance, as well as tissue maintenance and repair processes. ZVBGF3 is antagonists are useful for treating cancer, rheumatoid archritis, antenancial ischemia, vischemic limb disease, peripheral vascular disease, myocardial ischemia, vascular intimal hyperplasia, atherosclerosis, wound continual processes of the nervous system, and some continual processes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to the human growth factor homologue zvegf4

(AAB4865), and nucleic acids encoding it (AAC8155). Zvegf4 is a member
of the pober (platelet-derived growth factor)/YGFG (vascular endothelial
cgrowth factor) family. Zvegf4 has a growth factor domain (AAB48654)

(AAB4865) which has a beta barrel structure, and a CUB domain
(C AAB4865) which has a beta barrel structure, and a CUB domain
(C AAB4865) with has a beta barrel structure, and a CUB domain
(C AAB4865) which has a beta barrel structure, and a CUB domain
(C AAB4865) with having mitogenic activity on filtroblasts, vascular smooth
muscle calls and pericytes, and has also been shown to stimulate bone
growth. The invention also relates to fusion proteins comprising human
cvegf4 or fragments thereof, particularly human zvegf4 human zvegf4
nucleic acids; the recombinant expression of human zvegf4, an antibody
c which binds to human zvegf4 or a fragment thereof; a method of a cell-surface PDGF receptor using a zvegf4-derived polypeptide; a method
c for modulating the proliferation, differentiation migration migration of metabolism
c for bone cells, comprising exposing bone cells to zvegf4 and a method of detecting a genetic abnormality in the
collypeptides; and a method of detecting a genetic abnormality in the
crossing face of a patient. Zvegf4 proteins and derived fragments may be
cused to stimulate tissue development or repair, or cellular
cleared to stimulate tissue development or repair, or cellular
cleared to stimulate tissue development or repair, or cellular
cleared to stimulate tissue development or repair, or cellular
cleared to stimulate tissue davelopment or repair, or cellular
cleared to stimulate tissue davelopment or repair or cellular
cleared to their osteogenic activity, they may also be used to
cleared to their osteogenic activity, they may also be used to
cleared to the content damage, and may also be used to metabolism
celerosis). Due to their osteogenic activity, they may also be used to
cleared to endothelial precursor ste

requiring stellate cell activations for treating fibrosis and reducing stellate cell activation in a mammal. The method comprises administering a composition containing a Zvegf3 antagonist in combination with a delivery vehicle. The Zvegf3 is a protein that is structurally called to platelet-derived growth factor (PDGF) and the vascular condotherial growth factors (VEGF). The Zvegf3 is a protein is also designated as "VEGF-R" and "PDGF-C". The Zvegf3 antagonist is useful to block the mitogenic effects of zvegf3 and thereby to inhibit or prevent and treat called so scleroderma, fibrotic disorders of liver such as chronic active bepatitis, fulminant viral hepatitis, post necrotic cirrhosis and alphalantirypsin deficiency, fibrotic disorders of the kidney such as diabetic glomerulosclerosis, focal glomerulosclerosis, fibrotic disorders of the kidney such as diabetic glomerulosclerosis, focal glomerulosclerosis, fibrotic disorders of the lung such as silicosis, asbestosis, idiopathic pulmonary fibrosis, bronchiolitis obliterans-organising pneumonia and pulmonary hypertension, fibrotic disorders of the bone such as transplant vascullopathy and fibroproliferative casculature such as transplant vascullopathy and fibroproliferative disorders of the bone such as osteopetrosis and hyperostosis. The present

The invention relates to an isolated polypeptide, designated zvegf3 (a vascular endothelial growth factor-like protein) of 111-136 amino acid residues in length and comprises the sequence appearing as ABG92889 from amino acid residues 23-35. Also included are an isolated protein comprision a first polypeptide disulphide bonded to a second polypeptide, where teach of the first and second bolypeptides is from zvegf 3, and where the protein modulates cell proliferation, differentiation, where the protein modulates cell proliferation, differentiation, metabolism or migration, the zvegf 3 is useful as additives in expression vectors and host cells. Zvegf 3 is useful as additives in tissue adhesives for promoting revascularisation of the healing tissue, for designing molecules that antagonise semaphorin-stimulated activities, including neurite growth, cardiovascular development, cartilage and ilmb development, and T and B-cell function, and for imaging tumours or other sites of abnormal cell proliferation and in gene therapy applications.

The proceins are useful therapeutically to stimulate tissue development or repair, or cellular differentiation or proliferation, for stimulating circulatory level of the growth of fibroblast or smooth muscle cells, as molecular weight croce repair, or cellular differentiation or proliferation, for stimulating circulatory level of the growth of solid tumours, for treating diabetic retinopathy, provided solid tumours, for treating diabetic retinopathy, glomerulosof arthritis, various forms of cancers, anterimmune containing star formation, weloids, liver fibrosis, including scar formation, keloids, liver fibrosis, including scar formation, keloids, liver fibrosis, skin wounds, ulcers, burns, skin grafting, and female reproductive tract disorders contromes, currends such as such as disease, circulatory disorders eg. heart failure, hepatic or portal avoid sorders eg. heart failure, hepatic or proteined on chromosome 3. The present sequence represents zvegf avegenerating neurite outgene
atherosclerosis; skin wound; ulcer; burn; skin grafting; female reproductive tract disorder; chronic liver disease; circulatory disorder; heart failure; neurodegenerative disease; multiple sclerosis; Parkinson's disease; Alzheimer's disease; stroke;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel polypeptide, designated zvegf3 useful for treating skin wounds, ulcers, burns, skin grafting, female reproductive tract disorders, Parkinson's disease, and Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                   Shoemaker KE;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The patent discloses a method for producing a transgenic, non-human animal over-expressing a platelet derived growth factor C (PDGF-C), or its functional fragment or analogue. The method involves introducing a transgenic PDGF-C DNA into a cell of a non-human animal, introducing the cell into a non-human animal. The transgenic mon-human animal. The transgenic animal is useful as a model to study disease states characterised by over-expression of PDGF-C and to find therapy for those diseases, particularly hypertrophy and fibrosis in protein from mouse
                                                                                                                                                                                                240
                                                                                                                                                                                                                                                                  300
                                                                                                                                                                                                                                                                                  PKFPHTYPRNMVLVWRLVAVDENVRIQLIFDERFGLEDPEDDICKYDFVEVEFPSDGSVL 120
                                                                               A transgenic animal over-expressing platelet derived growth factor C is useful to study and find therapy for disease associated with PDGF-C over-expression, including cardiac hypertrophy and fibrosis.

The sequences given in AAB47889-90 represent human and mouse zvegf3, respectively. zvegf3 is a platelet derived growth factor (PDGF) homolog and it was used in the method of the invention for promoting growth of bone, ligament or cartilage and stimulating proliferation of osteoblasts or chondrocytes in a mammal. The proteins used were preferably a dimeric protein of residues 235-345 of human zvegf3 or all of the mouse zvegf3 protein of residues 235-345 of human zvegf3 or all of the mouse zvegf3 protein, with a delivery vehicle. The method of th invention is useful for promoting growth of bone, ligament or cartilage in a mammal, where the composition is administered at a site of a bony defect, preferably a fracture, bone graft site, implant site, or periodontal pocket, and for stimulating proliferation of osteoblasts or chondrocytes in a mammal. It is further useful for promoting proliferation of osteoblasts, costeoclasts, chondrocytes or bone marrow stem cells, where the bone marrow stem cells are harvested from a patient prior to culture. The method is therefore useful for treating osteoporosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                180

The invention relates to an isolated protein comprising a first polypeptide disulphide-bonded to a second polypeptide. The first and second polypeptides are from 113-138 amino acid residues and comprises 258-370 amino acid residues of human growth factor homologue ZVEGF4. The protein stimulates proliferation, differentiation, or migration of mesenchymal cells and may modulate activities mediated by cell surface semaphorins. ZVEGF4 may be used to design ant/agonists of neuropilin-semaphorin interactions which may be 0 use in neurite growth, cardiovascular development, cartilage and limb development, T- and B-cell functions as well as treating theumatoid arthritis, various forms of cancer, autoimmune diseases, inflammation, retinopathies, haemangiomas, ischaemic events, neuropathies, acute nerve damage, central nervous system diseases and peripheral nervous system diseases including stroke.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             homomultimers or heteromultimers that act on tissues to control organ development by modulating cell proliferation, migration, differentiation, or metabolism. The gene for human ZVEGF4 is located on chromosome 11q22.3 -23.1. A transgene construct contained human growth hormone gene control human ZVEGF4. The present sequence is a ZVEGF4-related protein sequence. Note: The present sequence is a ZVEGF4-related protein sequence. Note: mention elsewhere in the specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 GRWCGSGTVPGKQTSKGNHIRIRFVSDEYFPSEPGFCIHYSIIMPQVTETTSPSVLPPSS 180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              LKEEVKLYSCTPRNFSVSIREELKRIDTIFWPGCLLVKRCGGNCACCLHNCNECQCVPRK 300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9
                                                                                                                                                                                                                                           Isolated growth factor analogue ZVEP4 proteins for pharmaceutical composition as, e.g. therapeutic agents, diagnostic agents, and research tools and reagents, includes polypeptides from amino acid residues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The isolated protein is also used for a pharmaceutical composition as therapeutic agents, diagnostic agents, and research tools and reagents. It can be used in the study and regulation of cell and tissue development, as components of cell culture media. The proteins can form
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     GRWCGSGTVPGKOTSKGNHIRIRFVSDEYFPSEPGFCHYSIIMPQVTETTSPSVLPPSS

The zvegf3 polypeptide is useful for stimulating the growth of fibroblasts or smooth muscle cells, or for activating a cell-surface platelet-derived growth factor (PDGF) alpha receptor. The zvegf3 polypeptide is useful as a PDGF alpha receptor agonist and thus is useful for treating full-thickness skin wounds, female reproductive tract and prolonged bleeding, periodontal disease, damaged liver tissue, and duodenal ulcers. The polypeptide is also useful as an additive in tissue adhesives for promoting revascularisation of healing tissue. The zvegf3 polypeptide is also useful for treating liver damage including damage to liver disease, chronic active hepatitis, hepatic chronic passive congestion (CPC), central haemorrhagic necrosis (CHN), hepatic vein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated zvegf3 polypeptide, useful for treating cancer, Alzheimer's disease, Parkinson's disease, chronic active hepatitis, hepatic vein thrombosis, comprises growth factor domain and CUB domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            angiogenesis, nervous system disorder, cytostatic; hepatotropic, vulnerary, tranquilliser, cerebroprotective, neuroprotective, nootropic, ophthalmological, dermatological, coagulant, cardiant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sheppard PO, Shoemaker KE;

cirrhosis, portal vein thrombosis, cardiac sclerosis, and many types of cirrhosis. The polypeptide is useful for enhancing expansion and mobilisation of endothelial precursor stem cells, creating and scalabilating new vessel formation in areas requiring neovascularisation, creating neovascularisation, creating neovascularisation, creating neovascularisation, creating neovascularisation, creating peripheral neuropathies by increasing spinal cord and sensory neurite outgrowth, and as part of therapeutic treatment for the regeneration of neurite outgrowths created by spinal injuries. Application may also be made in treating caused by spinal injuries. Application may also be made in treating caused by spinal injuries. Application may also be made in treating caused by spinal injuries. Application may also be made in treating caused deferma, and reducing fibrosis, keloids, liver fibrosis, lung calerosia, kidney fibrosis, and glomerulosclerosis. An antibody that binds creening to a scleroderma, and for treating proliferative vascular disorders, ceffects of zvegf3; and for treating proliferative vascular disorders, corlar neovascularisation, inflammatory disorders, rheumatoid arthritis, psoriasis, cancer, impaired or excessive vasculogenesis or anglogenesis. 180 PKFPHTYPRNMVLVWRLVAVDENVRIQLTFDERFGLEDPEDDICKYDFVEVEPSDGSVL 120 61 PKFPHTYPRNMVLVWRLVAVDENVRIQLTFDERFGLEDPEDDICKYDFVEVEEPSDGSVL 120 180 LKEEVKLYSCTPRNFSVSIREELKRIDTIFWPGCLLVKRCGGNCACCLHNCNECQCVPRK 300 241 LKEEVKLYSCTPRNFSVSIREELKRTDTIFWPGCLLVKRCGGNCACCLHNCNECQCVPRK 300 1 MILIGILILITSALAGQRIGTRAESNISSKLQLSSDKEQNGVQDPRHERVVTISGNGSIHS 60 Vulnerary; dermatological; wound healing; proliferation; zvegf3.; mouse. 121 GRWCGSGTVPGKQTSKGNHIRIRFVSDEYPPSEPGFCIHYSIIMPQVTETTSPSVLPPSS LSLDLLNNAVTAFSTLEELIRYLEPDRWQVDLDSLYKPTWQLLGKAFLYGKKSKVVNLNL LSLDLIANNAVTAFSTLEELIRYLEPDRWQVDLDSLYKPTWQLLGKAFLYGKKSKVVNLNL 1 MLLLGLLLLTSALAGQRTGTRAESNLSSKLQLSSDKEQNGVQDPRHERVVTISGNGSIHS 121 GRWCGSGTVPGKQTSKGNHIRIRFVSDEYFPSEPGFCIHYSIIMPQVTETTSPSVLPPSS Gaps ; 0 6; Length 345; VTKKYHEVLQLRPKTGVKGLHKSLTDVALEHHEECDCVCRGNAGG 345 301 VIKKYHEVLQLRPKTGVKGLHKSLTDVALEHHEECDCVCRGNAGG 345 0; Indels 100.0%; Score 1848; DB 6 100.0%; Pred. The invention relates to growth factor homologue zvegf4, its corresponding nucleic acid and methods of using them. The sequences of the invention are used in the study and regulation of cell and tissue development, as components of cell culture media and as diagnostic agents. The zvegf4 polypeptide can be used in treating full-thickness skin wounds, in fracture repair, skin grafting, in constructive healing wounds, in fracture repair, skin grafting, in constructive establing wounds, in fracture repair, skin grafting, in constructive establing wounds, in transplanted cells and tissues, or in creating female reproductive tract disorders, including acute or chronic placental insufficiency and prolonged bleeding. It can also be used to promote endothelialisation of vascular grafts and stents, in treating acute or chronic lesions of the gastrointestinal tract or treating or repairing liver damage. Zvegf4 can also be used for treating or chronic passive congestion (CPC) and central hemorrhagic necrosis (CHN). Creating priver damage. Zvegf4 can also be used for treating peripheral neuropathies or modulate or also be used for treating peripheral neuropathies or madulate or transplanted diseases including multiple sclerosis, Alzheimer's disease or Parkinson's disease including multiple sclerosis, Alzheimer's disease or Parkinson's disease or the polypeptides, mucleic acids and antiphedies can also be used to diagnose or tract disorders associated with cell loss or abnormal cell proliferation (including cancer). The invention is useful in gene therapy. The present sequence is mouse zvegf3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     GRWCGSGTVPCKQTSKGNHIRIRFVSDEYFPSEPGFCIHYSIIMPQVTETTSPSVLPPSS 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to a method of promoting wound healing, especially a dermal wound and for promoting proliferation of fibroblasts or smooth muscle cells in a mammal, by administering a polypeptide comprising growth factor domain of human growth factor homologue polypeptide, zvegf3. The present sequence is mouse zvegf3 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             9

The methods involve administering to the mammal a composition comprising a dimeric protein of human or mouse zvegf3 sequence and a delivery vehicle. Also disclosed are methods for promoting proliferation or differentiation of osteoblasts, osteoclasts, chondrocytes, or bone marrow stem cells. The delivery vehicle is powdered biodegradable polyester, aqueous polymetic, polymethacrylate, biodegradable polyester, aqueous polymeric gel or fibrin sealant. The methods of the invention are useful for promoting growth of bone, ligament or cartilage in a mammal. The present sequence represents mouse

The present invention describes secreted and transmembrane polypeptides and their polymucleotides. The nucleotide sequences are useful as sources of probes, primers, for chromosome mapping, and for generation of antisense sequences. They can also be used to create transgenic animals. The proteins can be used to treat a variety of diseases and disorders, depending on their function. Diseases that may be treated include blood coagulation disorders, cancers and cellular adhosion disorders. They may also be used to raise antibodies. AA233891 to AAZ34338, and AAY41685 to AAX41774 represent polynucleotide and polypeptide sequence given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 LKEEVKLYSCTPRNFSVSIRBELKRIDTIFWPGCLLVKRCGGNCACCLHNCNECQCVPRK 300

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            à
                                                                                                                                                  The present sequence represents a vascular endothelial growth factor related (VEGF-R) protein. VEGF-R can be used in assays to identify compounds that bind to it or that antagonize its activity. VEGF-R antagonists (e.g. anti-VEGF-R antibodies) are useful for inhibiting tissue growth. This is useful for inhibiting tumour growth and for treating cancer. VEGF-R itself can be used to stimulate tissue growth, angiogenesis and to treat coronary artery blockage. The VEGF-R coding sequence can be used for the recombinant production of the VEGF-R protein
                                                                                                                                                                                                                                                                                                 ö

This invention describes the isolation of a novel human vascular endothelial cell growth factor-E (VEGF-E) polypeptide which has tranquillizer, vulnery and cardiant activity. VEGF-E can be administered the treat cardiovascular or endothelial disorders in mammals, especially the waysessing encoding polymucleotides, to treat cardiovascular or endothelial disorders in mammals, especially continuants. It is useful in wound repair and tissue generation and creen cardiovascular or endothelial disorders in mammals, especially can be combined with a carrier in pharmaceutical compositions, which can be combined with a carrier in pharmaceutical compositions, which can combined with a carrier in pharmaceutical compositions, which can composition disorders in mammals (especially humans) e.g. cancer or age.

Composition and agonists, and the antegonists administered to treat angiogenic disorders in mammals (especially humans) e.g. cancer or age.

Consecular degeneration. It can be used to disgnose cardiovascular, and the entitlodies, cardiovascular, endothelial or angiogenic disorders in mammals (e.g. vascular disease, or neovascularization associated with tumor formation), by contacting the antibody with a tissue sample and detecting formation) composition and encoding veger cardiovascular, polypeptide complex. Polypuclectides encoding veger cardiovascular, endothelial or angiogenic disorder suncering in the veger cardiovascular and endothelial disorders in cardiovascular, endothelial or angiogenic disorder such as a tumor), by cardiovascular, endothelial or angiogenic disorder such as a tumor), by cardiovascular, polypeptide complex need to dispect to a disease related to a mutated form of VEGF-E (e.g. a cardiovascular, endothelial or angiogenic disorder such as a tumor), by cardiovascular, polypeptide complex need to dispect produce probes usef from a foother produce probes useful to an endothelial or angiogenic disorder such as a tumor), by cannole. They may also be used to dispect produce probes useful to an endothelia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            180

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

procollagen C-endopeptidase (EC 3.4.24.19) - African clawed frog (clone 22AN)
N.Alternate names: bone morphogenic protein 1
C,Species: Xenopus laevis (African clawed frog)
C,Date: 3.0-Sep-1933 #sequence_revision 20-Aug-1994 #text_change 09-Jul-2004
C,Accession: JC2218

 The cloning and expression of neuropilin-1.";

The cloning and expression of neuropilin-1.";

The cloning and expression of neuropilin-1.";

Submitted (JUL-2002) to the EMBL/GenBank/DDBJ databases.

Le cardiovascular system, in angiogenesis, in the formation of certain neuronal circuits and in organogenesis outside the nervous system. It mediates the chemorepulsant activity of semaphorins.

Regulates angiogenesis through a VEGF-dependent pathway.

System. It mediates the chemorepulsant activity of semaphorins.

Regulates angiogenesis through a VEGF-dependent pathway.

System. It mediates she chemorepulsant activity of semaphorins.

Regulates angiogenesis through a VEGF-dependent pathway.

System. It mediates species through a VEGF-dependent pathway.

Heavilla in paccant of the vector of semaphorins.

Maternal transcripts are widely expressed until the early gastrula stage, then become localized to the yolk syncytial layer. During semainly in neuronal and vascular tissues.

System and vascular tissues.
 This SWISS-PROT entry is copyright. It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation-the Buropean Bioinformatics Institute. There are no restrictions on its use by non-profit institutions as long as its content is in no way modified and this statement is not removed. Usage by and for commercial entities requires a license agreement (See http://www.isb-sib.ch/announce/or send an email to license@isb-sib.ch).
